

## ENID CASINO PERCEPTION STUDY

September 10<sup>th</sup> – 13<sup>th</sup>, 2018

N= 300, MOE± 5.63%

## Methodology

From a universe of roughly 15,000 Enid likely voters, 300 Enid likely voters were randomly selected to create a probability-based sample with a high level of coverage. These results have a margin of error (MoE) of  $\pm 5.63\%$

Respondents were surveyed using live interviewers from a sample of landlines and cellphones, using an overlapping dual frame sample design, in which cell phone respondents are interviewed regardless of whether or not they also have a landline.

Both landlines and cell phones are called multiple times during the field period over multiple days and nights; the standard is a minimum of four calls to each number. Interviews are conducted via a computer-assisted telephone interviewing (CATI) system. SoonerPoll's professional interviewers, and their supervisors, are extensively trained in interviewing practices, including techniques designed to achieve the highest possible respondent cooperation.

The sample was weighted by age and party.
